# Serial to Ethernet Module Specification

USR-TCP232-T2/S2

Introduction

USR-TCP232-T2/S2 is a tiny size serial TTL UART to Ethernet module which can realize data bidirectional transparent transmission between TTL and RJ45 port. Now we have upgraded firmware of the module. In addition to data transparent transmission, it also supports Modbus gateway function like Modbus RTU to Modbus and Modbus Polling. If users have an old version module, you can directly upgrade to experience new functions.

In firmware, the functionality of the two modules is identical. In hardware, the T2 is equipped with Ethernet port, which is packaged with pins. But the S2 module is SMD package without Ethernet port.

These modules can also be applied in RS232/485 by level shift circuit. USR-TCP232-T2/S2 is based on Cortex-M0 core. It has characters of low power, fast speed and high efficiency.
