

## AT Command for USR-W610s

### 1.1. Command Details

| NO. | Name       | Function  |
|-----|------------|---|
| 1   | AT         | Test if AT commands can be used                             |
| 3   | AT+S       | Restart the service to make the configuration take effect.  |
| 2   | AT+E       | Enable/disable AT command echo                              |
| 3   | AT+Z       | Restart device to make the configuration take effect.       |
| 4   | AT+R       | Restart the device  |
| 5   | AT+CLEAR   | Restore factory Sets  |
| 6   | AT+VER     | Query device version number                                 |
| 7   | AT+MAC     | Query the MAC address of the WAN port of the current device |
| 8   | AT+SN      | Query device SN   |
| 9   | AT+WEBU    | Query Web login username and password                       |
| 10  | AT+PLANG   | Query Web login language                                    |
| 11  | AT+UPTIME  | Query system runtime  |
| 12  | AT+WANINFO | Query WAN network card information                          |
| 13  | AT+LANINFO | Query LAN network card information                          |
| 14  | AT+WANN    | Query WAN port configuration                                |
| 15  | AT+LANN    | Query LAN port configuration                                |

|    |                  |   |
|----|------------------|---|
| 16 | AT+LAN           | Query/set LAN port configuration                  |
| 17 | AT+PING          | Execute ping command                              |
| 18 | AT+NETSTATUS     | Query the network card used for the default route |
| 19 | AT+UART1         | Set/query RS485 port parameters                   |
| 20 | AT+UART2         | Set/query RS232 port parameters                   |
| 21 | AT+UART1FT       | Set/query RS485 packet interval                   |
| 22 | AT+UART1FL       | Set/query RS485 packet length                     |
| 23 | AT+UART2FT       | Set/query RS232 packet interval                   |
| 24 | AT+UART2FL       | Set/query RS232 packet length                     |
| 25 | AT+CHLIST        | Query communication channel list                  |
| 26 | AT+CHSET         | Modify/add communication channels                 |
| 27 | AT+CHDEL         | Delete communication channel                      |
| 28 | AT+CHCLR         | Clear all communication channels                  |
| 29 | AT+CHCFG         | Modify/query channel parameters                   |
| 30 | AT+CHCACHE       | Query/set channel data caching function           |
| 31 | AT+CHREG         | Query/set registration packet function            |
| 32 | AT+CHHEART       | Query/set heartbeat packet function               |
| 33 | AT+CHTLS         | Query/set channel TLS configuration               |
| 34 | AT+CHMODBUS      | Query/set channel master polling configuration    |
| 35 | AT+MQTTFAMILYVER | Query/set MQTT version information                |

|    |                    |  |
|----|--------------------|--|
| 36 | AT+MQTTFAMILYAUTH  | Query/set MQTT authentication enable   |
| 37 | AT+MQTTFAMILYWILL  | Query/set MQTT will message information  |
| 38 | AT+MQTTFAMILYCLEAN | Query/set MQTT clean session function  |
| 39 | AT+MQTTFAMILYRCTM  | Query/set MQTT reconnection detection interval                                       |
| 40 | AT+MQTTFAMILYHEART | Query/set MQTT heartbeat time  |
| 41 | AT+TOPICPUBLIST    | Query MQTT preset publish topic list   |
| 42 | AT+TOPICPUBADD     | Add a new topic to the preset publish topics   |
| 43 | AT+TOPICPUBDEL     | Delete a topic with the specified name from the preset publish topics of a channel   |
| 44 | AT+TOPICPUBCLR     | Clear preset publish topics of a specified channel                                   |
| 45 | AT+TOPICSUBLIST    | Query MQTT preset subscribe topic list   |
| 46 | AT+TOPICSUBADD     | Add a new topic to the preset subscribe topics                                       |
| 47 | AT+TOPICSUBDEL     | Delete a topic with the specified name from the preset subscribe topics of a channel |
| 48 | AT+TOPICSUBCLR     | Clear preset subscribe topics of a specified channel                                 |
| 49 | AT+NETAT           | Query/set network AT   |
| 50 | AT+HEARTEN         | Set/query heartbeat packet enable  |
| 51 | AT+HEARTBIND       | Query/set serial port heartbeat packet binding port                                  |
| 52 | AT+HEARTTM         | Set/query heartbeat time   |
| 53 | AT+HEARTDT         | Query/set serial port heartbeat packet function                                      |

|    |               |  |
|----|---------------|--|
| 54 | AT+HEARTDTHEX | Query/set serial port heartbeat packet content (HEX) |
| 55 | AT+NETRSTIM   | Set/query no-data restart time                       |
| 56 | AT+NETRCTIM   | Set/query no-data reconnection time                  |
| 57 | AT+COMRSTIM   | Set/query serial port no-data restart time           |

## 1.2. Device Management

### 1.2.1. AT

|             |  |
|-------------|--|
| Name        | AT   |
| Function    | Test AT commands   |
| Query       | AT<br>OK   |
| Set         | None   |
| Parameters  | Return: OK   |
| Description | This command takes effect immediately. Returning "OK" indicates the AT command is available. |

### 1.2.2 AT+S

|          |  |
|----------|--|
| Name     | AT+S   |
| Function | Restart the service to make the configuration take effect. |
| Query    | AT+S{CR}{LF}<br>{CR}{LF}OK{CR}{LF}                         |

### **1.2.3. AT+E**

|             |   |
|-------------|---|
| Name        | AT+E  |
| Function    | Set/query AT command echo Sets  |
| Query       | AT+E{CR}{LF}<br>E: ON or OFF  |
| Set         | AT+E=<ON/OFF>{CR}{LF}<br>{CR}{LF}OK{CR}{LF}                                       |
| Parameters  | ON: Enable echo, display input commands;<br>OFF: Disable echo in AT command mode. |
| Description | This command must be in uppercase and takes effect after restarting the DTU.      |

### **1.2.3. AT+Z**

|             |   |
|-------------|---|
| Name        | AT+Z  |
| Function    | Restart device to make the configuration take effect. |
| Set         | AT+Z{CR}{LF}<br>{CR}{LF}OK{CR}{LF}                    |
| Parameters  | None  |
| Description | Restart device to make the configuration take effect  |

### **1.2.4. AT+R**

|          |                    |
|----------|--------------------|
| Name     | AT+R               |
| Function | Restart the device |
| Set      | AT+R{CR}{LF}       |

|             |   |
|-------------|---|
|             | {CR}{LF}OK{CR}{LF}  |
| Parameters  | None  |
| Description | Upon correct execution, returns "OK" and the device restarts. |

### 1.2.5. AT+CLEAR

|             |  |
|-------------|--|
| Name        | AT+CLEAR   |
| Function    | Restore factory Sets   |
| Set         | AT+CLEAR{CR}{LF}<br>{CR}{LF}OK{CR}{LF}                                 |
| Parameters  | None   |
| Description | Upon correct execution, restores factory Sets and restarts the device. |

### 1.2.6.

#### AT+VER

|             |  |
|-------------|--|
| Name        | AT+VER   |
| Function    | Query device firmware version                                |
| Query       | AT+VER{CR}{LF}<br>{CR}{LF}+VER:<ver>{CR}{LF}                 |
| Set         | None   |
| Parameters  | ver: Current firmware version                                |
| Description | Upon correct execution, returns the current firmware version |

### **1.2.7. AT+MAC**

|             |  |
|-------------|--|
| Name        | AT+MAC                                       |
| Function    | Query WAN port MAC address                   |
| Query       | AT+MAC{CR}{LF}<br>{CR}{LF}+MAC:<MAC>{CR}{LF} |
| Set         | None   |
| Parameters  | mac: WAN port MAC address                    |
| Description | MAC address for WAN Port                     |

### **1.2.8. AT+SN**

|            |  |
|------------|--|
| Name       | AT+SN                                      |
| Function   | Query device SN information                |
| Query      | AT+SN{CR}{LF}<br>{CR}{LF}+SN: <sn>{CR}{LF} |
| Set        | None                                       |
| Parameters | sn: 20-digit SN code                       |

### **1.2.9. AT+WEBU**

|          |                                       |
|----------|---------------------------------------|
| Name     | AT+WEBU                               |
| Function | Query Web login username and password |

|            |  |
|------------|--|
| Query      | AT+WEBU{CR}{LF}<br>{CR}{LF}+WEBU:<user>,<pw>{CR}{LF} |
| Parameters | user: Web login username;<br>pw: Web login password  |

### 1.2.10. AT+PLANG

|            |  |
|------------|--|
| Name       | AT+PLANG   |
| Function   | Query Web login language                               |
| Query      | AT+PLANG{CR}{LF}<br>{CR}{LF}+PLANG:<plang>{CR}{LF}     |
| Set        | {CR}{LF}AT+PLANG=<plang>{CR}{LF}<br>{CR}{LF}OK{CR}{LF} |
| Parameters | plang: zh_cn (Chinese)<br>en (English)                 |

### 1.2.11. AT+UPTIME

|            |                          |
|------------|--------------------------|
| Name       | AT+UPTIME                |
| Function   | Query system runtime     |
| Query      | AT+UPTIME:<time>{CR}{LF} |
| Set        | None                     |
| Parameters | time                     |

## 1.2.12. AT+WANINFO

|            |  |
|------------|--|
| Name       | AT+WANINFO   |
| Function   | Query WAN network card information   |
| Query      | AT+WANINFO:<mac> <ip> <mask> <rx_packets> <tx_packets><rx_bytes> <tx_bytes>{CR}{LF}  |
| Set        | None   |
| Parameters | mac: WAN MAC;<br>ip: WAN IP<br>mask: WAN subnet mask<br>rx_packets: Received packets<br>tx_packets: Sent packets<br>rx_bytes: Received traffic<br>tx_bytes: Sent traffic |

## 1.2.13. AT+LANINFO

|            |   |
|------------|---|
| Name       | AT+LANINFO  |
| Function   | Query LAN network card information  |
| Query      | AT+LANINFO {CR}{LF}   |
| Set        | None  |
| Parameters | mac: LAN MAC<br>ip: LAN IP; mask: LAN subnet mask; rx_packets: Received packets;<br>tx_packets: Sent packets; rx_bytes: Received traffic; tx_bytes: Sent traffic*Note: If VLAN is configured, this command returns LAN information. |

### **1.2.14. AT+WANN**

|            |  |
|------------|--|
| Name       | AT+WANN  |
| Function   | Query WAN port configuration   |
| Query      | AT+WANN:<type>,<ip>,<mask>,<gateway>{CR}{LF}   |
| Set        | None   |
| Parameters | type: WAN protocol type<br>ip: WAN IP<br>mask: WAN subnet mask<br>gateway: WAN gateway |

### **1.2.15. AT+LANN**

|            |   |
|------------|---|
| Name       | AT+LANN   |
| Function   | Query LAN port configuration  |
| Query      | AT+LANN{CR}{LF}<br>{CR}{LF}+LANN:<ip>,<mask> {CR}{LF}   |
| Set        | None  |
| Parameters | ip: LAN IP<br>mask: LAN subnet mask<br>Note: If VLAN is configured, this command returns LAN information. |

### **1.2.16. AT+LAN**

|             |  |
|-------------|--|
| Name        | AT+LAN   |
| Function    | Query/set LAN port configuration   |
| Query       | AT+LAN{CR}{LF}<br>{CR}{LF}+LAN:<ip>,<mask>{CR}{LF}   |
| Set         | {CR}{LF}AT+LAN=<ip>,<mask>{CR}{LF}   |
| Parameters  | ip: LAN IP (standard IP format x.x.x.x, x can be set as 0~255)<br>mask: LAN subnet mask (standard subnet mask format)<br>*Note: If VLAN is configured, this command returns LAN information. |
| Description | -  |

### **1.2.18. AT+NETSTATUS**

|           |  |
|-----------|--|
| Name      | AT+NETSTATUS   |
| Function  | Query the network card status used by the default route  |
| Query     | AT+NETSTATUS{CR}{LF}<br>{CR}{LF}+NETSTATUS:<net>{CR}{LF} |
| Set       | None   |
| Parameter | net: Current network card status for internet access     |

## 1.3. Serial Port Sets

### 1.3.1. AT+UART1

|            |   |
|------------|---|
| Name       | AT+UART1  |
| Function   | Set/query 485 port parameters   |
| Query      | AT+UART1? {CR}{LF}<br>{CR}{LF}+UART1:<baudrate>,<data_bit>,<stop_bit>,<parity>{CR}{LF}<br>{CR}{LF}OK {CR}{LF}   |
| Set        | AT+UART1=<baudrate>,<data_bit>,<stop_bit>,<parity>{CR}{LF}<br>CR}{LF}OK{CR}{LF}   |
| Parameters | <baudrate> Baud rate: 230400/115200<br>(default)/57600/38400/19200/9600/4800/2400/1200.<br><data_bit>: Data bits, 7/8<br><stop_bit>: Stop bits, 1/2<br><parity>: Parity, NONE/EVEN/ODD. |

### 1.3.2. AT+UART2

|            |  |
|------------|--|
| Name       | AT+UART2   |
| Function   | Set/query RS232 port parameters  |
| Query      | AT+UART2? {CR}{LF}<br>{CR}{LF}+UART2:<baudrate>,<data_bit>,<stop_bit>,<parity>{CR}{LF}<br>{CR}{LF}OK{CR}{LF} |
| Set        | AT+UART2=<baudrate>,<data_bit>,<stop_bit>,<parity> {CR}{LF}<br>CR}{LF}OK{CR}{LF}                             |
| Parameters | <baudrate> Baud rate 115200<br>(default)/57600/38400/19200/9600/4800/2400/1200.                              |

|  |   |
|--|---|
|  | <p>&lt;data_bit&gt;: Data bits, 7/8</p> <p>&lt;stop_bit&gt;: Stop bits, 1/2</p> <p>&lt;parity&gt;: Parity, NONE/EVEN/ODD.</p> |
|--|---|

### 1.3.3. AT+UART1FT

|           |  |
|-----------|--|
| Name      | AT+UART1FT   |
| Function  | Set/query 485 packet interval  |
| Query     | <p>AT+UART1FT? {CR}{LF}</p> <p>{CR}{LF}+UART1FT:&lt;time&gt;{CR}{LF}</p> <p>{CR}{LF}OK{CR}{LF}</p> |
| Set       | <p>AT+UART1FT=&lt;time&gt; {CR}{LF}</p> <p>{CR}{LF}OK{CR}{LF}</p>                                  |
| Parameter | <time>:Packaging time, Packet interval range 0~3000 ms, default is 10ms                            |

### 1.3.4. AT+UART1FL

|           |   |
|-----------|---|
| Name      | AT+UART1FL  |
| Function  | Set/query RS485 packet length   |
| Query     | <p>AT+UART1FL?{CR}{LF}</p> <p>{CR}{LF}+UART1FL:&lt;length&gt;{CR}{LF}</p> <p>{CR}{LF}OK{CR}{LF}</p> |
| Set       | <p>AT+UART1FL=&lt;length&gt; {CR}{LF}</p> <p>{CR}{LF}OK{CR}{LF}</p>                                 |
| Parameter | <length>: Packet length, range 5~1500 bytes, default is 1000  |

### 1.3.5. AT+UART2FT

|           |  |
|-----------|--|
| Name      | AT+UART2FT   |
| Function  | Set/query RS232 packet interval time   |
| Query     | AT+UART2FT? {CR}{LF}<br>{CR}{LF}+UART2FT:<time>{CR}{LF}<br>{CR}{LF}OK{CR}{LF}          |
| Set       | AT+UART2FT=<time> {CR}{LF}<br>{CR}{LF}OK{CR}{LF}                                       |
| Parameter | <time>:Packaging time, Packet interval time range 1~3000 ms<br>( Default time is 10ms) |

### 1.3.6. AT+UART2FL

|           |  |
|-----------|--|
| Name      | AT+UART2FL   |
| Function  | Set/query RS232 packet length  |
| Query     | AT+UART2FL?{CR}{LF}<br>{CR}{LF}+UART2FL:<length>{CR}{LF}<br>{CR}{LF}OK{CR}{LF} |
| Set       | AT+UART2FL=<length> {CR}{LF}<br>{CR}{LF}OK{CR}{LF}                             |
| Parameter | <length>: Packet length, range 5~1500, default is 1000                         |

### 1.3.7. AT+P485CLT

|          |  |
|----------|--|
| Name     | AT+P485CLT   |
| Function | Set/Query 485 Anti-Collision   |
| Query    | AT+P485CLT?{CR}{LF}<br>{CR}{LF}+P485CLT:<enable><time>{CR}{LF}<br>{CR}{LF}OK{CR}{LF} |
| Set      | AT+P485CLT:<enable><time>{CR}{LF}<br>{CR}{LF}OK{CR}{LF}                              |

|           |  |
|-----------|--|
| Parameter | <enable> : ON/OFF(default)<br><time> : 0-255ms (Default value: 10ms) |
|-----------|--|

### 1.3.8. AT+F232CLT

|           |  |
|-----------|--|
| Name      | AT+F232CLT   |
| Function  | Set/Query RS232 follow control   |
| Query     | AT+F232CLT?{CR}{LF}<br>{CR}{LF}+F232CLT:<enable>{CR}{LF}<br>{CR}{LF}OK{CR}{LF} |
| Set       | AT+F232CLT:<enable>{CR}{LF}<br>{CR}{LF}OK{CR}{LF}                              |
| Parameter | <enable> : ON/OFF(default)   |

## 1.4. Channel Configuration

### 1.4.1. AT+CHLIST

|           |   |
|-----------|---|
| Name      | AT+CHLIST   |
| Function  | Query communication channel list  |
| Query     | {CR}{LF} AT+CHLIST?{CR}{LF}<br>{CR}{LF}+CHLIST:{CR}{LF}<CH>,<Protocol>,<Enable>,<Description>{CR}{LF}<br>{CR}{LF}OK{CR}{LF}   |
| Set       | None  |
| Parameter | <CH>: Channel name<br><Protocol>: Channel protocol<br>TCP/C/TCPS/UDPC/UDPS/MQTT/HTTPD/AWS<br><Enable>: Enable Channel<br>ON (Default) / OFF<br><Description>: Channel Description |

### 1.4.2. AT+CHSET

|      |          |
|------|----------|
| Name | AT+CHSET |
|------|----------|

|            |  |
|------------|--|
| Function   | Set communication channel  |
| Query      | None   |
| Set        | AT+CHSET=<CH>,<Protocol>,<Enable>,<Description> {CR}{LF}<br>{CR}{LF}OK{CR}{LF}   |
| Parameters | <CH>: Channel name, (1-32 bytes)<br><br><Protocol>:Channel protocol<br>(TCP/C/TCPS/UDPC/UDPS/MQTT/HTTPD/AWS)<br><br><Enable>:Channel enable status : ON (default)/OFF<br><br><Description>: Channel description (1~32 bytes) |

#### 1.4.3. AT+CHDEL

|           |  |
|-----------|--|
| Name      | AT+CHDEL                                     |
| Function  | Delete communication channel                 |
| Query     | None   |
| Set       | AT+CHDEL=<CH> {CR}{LF}<br>{CR}{LF}OK{CR}{LF} |
| Parameter | <CH>: Channel name, range:1~32 bytes         |

#### 1.4.4. AT+CHCLR

|             |   |
|-------------|---|
| Name        | AT+CHCLR                                |
| Function    | Clear all communication channels        |
| Query       | None                                    |
| Set         | AT+CHCLR?{CR}{LF}<br>{CR}{LF}OK{CR}{LF} |
| Parameter   | None                                    |
| Description | Delete all added channels               |

#### 1.4.5. AT+CHCFG

|            |  |
|------------|--|
| Name       | AT+CHCFG   |
| Function   | Modify/query channel parameters  |
| Query      | AT+CHCFG=<CH>? {CR}{LF}<br>{CR}{LF}+OK=<CH>,<Protocol>,<variable parameters according to 'Protocol'...>{CR}{LF}  |
| Set        | AT+CHCFG=CH>,<Protocol>,<variable parameters according to 'Protocol'...>{CR}{LF}<br>{CR}{LF}OK{CR}{LF}   |
| Parameters | <p>&lt;CH&gt;: Channel name</p> <p>&lt;Protocol&gt;:Protocol<br/>(TCPC/TCPS/UDPC/UDPS/HTTPD/MQTT/AWS)</p> <p><b>&lt;Variable parameter section&gt;:</b></p> <p><b>TCPC:</b> &lt;Server&gt;,&lt;Re-Port&gt;,&lt;Lo-Port&gt;,&lt;Trans&gt;,&lt;BindCOM&gt;<br/>&lt;Server&gt;: Remote server address, (0-63 bytes)<br/>&lt;Re-Port&gt;: Server port, Range: [1-65535]<br/>&lt;Lo-Port&gt;: Local port, Range: [0-65535] (0 means random)<br/>&lt;Trans&gt;: Transmission mode<br/>TRANS - Transparent transmission (default)<br/>MODBUS - ModBUSRTU<br/>&lt;BindCOM&gt;: Channel binding (ALL not supported in MODBUS mode)<br/>485 - COM1-485 (Default)<br/>232 - COM2-232<br/>ALL - COM1&amp;COM2</p> <p><b>TCPS:</b> &lt;Lo-Port&gt;,&lt;MxCon&gt;,&lt;Mode&gt;,&lt;Trans&gt;,&lt;BindCOM&gt;<br/>&lt;Lo-Port&gt; : Local port, [1-65535]<br/>&lt;MxCon&gt; : Max Connections, range: 1-16, default qty: 8<br/>&lt;Mode&gt;:Measures for Exceeding Connection Limit<br/>KEEP- Keep connection<br/>KICK- Kick out (Default)<br/>&lt;Trans&gt;: Transmission mode<br/>TRANS - Transparent transmission (default)<br/>MODBUS - ModBUSRTU<br/>&lt;BindCOM&gt;: Channel binding (ALL not supported in MODBUS mode)<br/>485 - COM1-485 (Default)<br/>232 - COM2-232<br/>ALL - COM1&amp;COM2</p> |

|             |   |
|-------------|---|
|             | <p><b>UDPC:</b> &lt;Server&gt;,&lt;Re-Port&gt;,&lt;Lo-Port&gt;,&lt;checkPort&gt;,&lt;BindCOM&gt;</p> <p>&lt;Server&gt;: Remote server address, (0-63 bytes)<br/>The default value: test.cn</p> <p>&lt;Re-Port&gt;: Server port, Range: [1-65535]</p> <p>&lt;Lo-Port&gt;: Local port, Range: [0-65535] (0 means random)</p> <p>&lt;checkPort&gt;: Port verification<br/>ON ( Default)/OFF</p> <p>&lt;BindCOM&gt;: Channel binding<br/>485 - COM1-485 (Default)<br/>232 - COM2-232<br/>ALL - COM1&amp;COM2</p> <p><b>UDPS:</b> &lt;Lo-Port&gt;,&lt;BindCOM&gt;</p> <p>&lt;Lo-Port&gt; : Local port, [1-65535]</p> <p>&lt;BindCOM&gt;: Channel binding<br/>485 - COM1-485 (Default)<br/>232 - COM2-232<br/>ALL - COM1&amp;COM2</p> <p><b>MQTT:</b> &lt;Server&gt;,&lt;Re-Port&gt;,&lt;ID&gt;,</p> <p>&lt;Server&gt;: Remote server address, (1-128 bytes)<br/>Default: cloudmqtt.usr.cn</p> <p>&lt;Re-Port&gt;: Server port, Range: [1-65535]<br/>Default:1883</p> <p>&lt;ID&gt;: The client ID, (1-128 bytes)<br/>Default: SN</p> |
| Description | Returns an error if the protocol does not match the existing channel protocol.Serial port binding parameter 'ALL' is not allowed during MODBUS polling.   |

#### 1.4.6. AT+CHCACHE

|          |  |
|----------|--|
| Name     | AT+CHCACHE   |
| Function | Query/set channel data caching function  |
| Query    | AT+ CHCACHE=<CH>{CR}{LF}<br>{CR}{LF}+CHCACHE:<CH>,<Enable>,<Cure>,<Mode>{CR}{LF}<br>{CR}{LF}OK{CR}{LF} |

|             |  |
|-------------|--|
| Set         | AT+CHCACHE=<CH>,<Enable>[,<Cure><Mode>]{CR}{LF}{CR}{LF}OK{CR}{LF}  |
| Parameters  | <p>Data overflow handling (DISOLD - discard old data/DISNEW - discard new data): Caching mode (PCKLEN - cache length limit/PCKCNT - cache packet count limit)</p> <p>&lt;CH&gt; : Channel Name<br/> &lt;Enable&gt;: Authentication enable status when connecting to server<br/> ON / OFF ( Default)<br/> &lt;Cure&gt;: Data overflow handling<br/> DISOLD - Discard old data<br/> DISNEW - Discard new data<br/> &lt;Mode&gt;: Caching mode<br/> PCKLEN - Cache length limit<br/> PCKCNT - Cache packet quantity limit</p> |
| Description | No need to enter other parameters when closed. Supported channel protocols: TCPC/TCPS/MQTT/AWS/Cloud   |

#### 1.4.7. AT+CHREG

|            |  |
|------------|--|
| Name       | AT+CHREG   |
| Function   | Query/set channel registration packet function   |
| Query      | AT+CHREG=<CH>{CR}{LF}{CR}{LF}+CHREG:<CH>,<Mode>,<Type>[,<DataType>][,<Data>]{CR}{LF}{CR}{LF}OK{CR}{LF}   |
| Set        | AT+CHREG=<CH>,<Mode>,<Type>[,<DataType>][,<Data>]{CR}{LF}{CR}{LF}OK{CR}{LF}  |
| Parameters | <p>&lt;CH&gt; : Channel name (HTTPD and MQTT not supported)</p> <p>&lt;Mode&gt;: Registration packet mode</p> <p>NONE - Off</p> <p>USER - user-defined</p> <p>SN</p> <p>MAC</p> <p>&lt;Type&gt;: Sending Mode</p> <p>FIRST - Send a data packet when connecting to the server</p> <p>EVERY - Add the registration packet to the front of each transmitted data packet</p> <p>When registration packet mode is USER:</p> <p>&lt;DataType&gt;: User-defined Registration Packet Data Type (only when</p> |

|             |   |
|-------------|---|
|             | <p>USER mode is selected)</p> <p>HEX - Custom registration packet data type is hexadecimal string, range [2-64]</p> <p>ASCII - User-defined registration packet data type is ASCII string, range [1-32]</p> <p>&lt;Data&gt;:User-defined registration packet data content</p> |
| Description | <p>Supported channel protocols: TCPC/UDPC.</p> <p>No need to enter other parameters when registration packet is closed.</p>   |

#### 1.4.8. AT+CHHEART

|             |  |
|-------------|--|
| Name        | AT+CHHEART   |
| Function    | Query/set heartbeat packet function  |
| Query       | AT+CHHEART=<CH>{CR}{LF}<br>{CR}{LF}+CHHEART:<CH>,<Enable>,<Time>,<DataType>,<Data>{CR}{LF}<br>{CR}{LF}OK{CR}{LF}   |
| Set         | AT+CHHEART=<CH>,<Enable>[,<Time>,<DataType>,<Data>]{CR}{LF}<br>{CR}{LF}OK{CR}{LF}  |
| Parameters  | <p>&lt;CH&gt;: Channel name</p> <p>&lt;Enable&gt;: Activate the heartbeat packet function<br/>OFF (Default) /ON</p> <p>&lt;Time&gt; : Heartbeat Package Time, range:[1-6000 seconds]<br/>Default value: 60seconds</p> <p>&lt;DataType&gt; User-defined heartbeat Packet Data Type (only when USER mode is selected)<br/>HEX - Custom packet data type is hexadecimal string, range [2-64]<br/>ASCII - User-defined packet data type is ASCII string, range [1-32]</p> <p>&lt;Data&gt;: Heartbeat data type</p> |
| Description | <p>Supported channel protocols: TCPC/UDPC.</p> <p>No need to enter other parameters when heartbeat packet is closed.</p>   |

#### 1.4.9. AT+CHTLS

|          |  |
|----------|--|
| Name     | AT+CHTLS   |
| Function | Query/set TLS function for channel   |
| Query    | AT+CHTLS=<CH>{CR}{LF}<br>{CR}{LF}+CHTLS:<CH>,<Enable>,<Method>{CR}{LF}<br>{CR}{LF}OK{CR}{LF} |

|             |   |
|-------------|---|
| Set         | <code>AT+CHTLS=&lt;CH&gt;,&lt;Enable&gt;,&lt;Method&gt;{CR}{LF}{CR}{LF}OK{CR}{LF}</code>  |
| Parameters  | <p>&lt;CH&gt; : Channel Name<br/> &lt;Enable&gt;: Authentication enable status when connecting to the server<br/> OFF - Close (Default)<br/> TLS10 - TLS1.0<br/> TLS12 - TLS1.2</p> <p>&lt;Method&gt;: Certificate authentication method<br/> NONE - Do not verify the certificate (default)<br/> SERVER - Verify the server certificate<br/> BOTH - Two-way verification</p> |
| Description | <p>No other parameters need to be input when shutting down.</p> <p>Supported channel protocols: MQTT, TCPC, HTTPD [Note: AWS supports TLS, default configuration, and does not support AT command for configuration query]</p>  |

### 1.5.0 AT+CHMODBUS

|             |   |
|-------------|---|
| Name        | AT+CHMODBUS   |
| Function    | Query/set Channel Host Polling Configuration  |
| Query       | <code>AT+CHMODBUS=&lt;CH&gt;{CR}{LF}{CR}{LF}+CHMODBUS:&lt;CH&gt;,&lt;Enable&gt;,&lt;Ack&gt;,&lt;Time&gt;{CR}{LF}{CR}{LF}OK{CR}{LF}</code>   |
| Set         | <code>AT+CHMODBUS=&lt;CH&gt;,&lt;Enable&gt;,&lt;Ack&gt;,&lt;Time&gt;{CR}{LF}{CR}{LF}OK{CR}{LF}</code>   |
| Parameters  | <p>&lt;CH&gt;: Channel Name<br/> &lt;Enable&gt;: Host Polling Enable Status<br/> OFF - Disable (Default)<br/> ON - Enable</p> <p>&lt;Ack&gt;: Timeout Response<br/> OFF - Disable (Default)<br/> ON - Enable</p> <p>&lt;Time&gt;: Timeout duration range, (10-6000ms)<br/> Default value: 200ms</p> |
| Description | <p>When closing, other parameters do not need to be input.</p> <p>Supported channel protocols: TCPC, TCPS</p> <p>An error is returned if the protocol transmission mode is not MODBUS.</p>  |

## 1.5. MQTT Protocol Configuration

### 1.5.1. AT+MQTTFAMILYVER

|             |   |
|-------------|---|
| Name        | AT+MQTTFAMILYVER  |
| Function    | Query/Setting MQTT Version  |
| Query       | AT+ MQTTFAMILYVER=<CH>{CR}{LF}<br>{CR}{LF}+MQTTFAMILYVER:<CH>,<Ver>{CR}{LF}<br>{CR}{LF}OK{CR}{LF} |
| Setting     | AT+ MQTTFAMILYVER =<CH>,<Ver>{CR}{LF}<br>{CR}{LF}OK{CR}{LF}                                       |
| Parameters  | <CH>: Channel name<br><Ver>: MQTT version<br>Default version - V3.1.1                             |
| Description | Supported channel protocol: MQTT  |

### 1.5.2. AT+MQTTFAMILYAUTH

|            |  |
|------------|--|
| Name       | AT+MQTTFAMILYAUTH  |
| Function   | Query/set MQTT version   |
| Query      | AT+ MQTTFAMILYAUTH=<CH>{CR}{LF}<br>{CR}{LF}+MQTTFAMILYAUTH:<CH>,<Enable>,<Username>,<Password>{CR}{LF}<br>{CR}{LF}OK{CR}{LF}   |
| Setting    | AT+MQTTFAMILYAUTH=<CH>,<Enable>,<Username>,<Password>{CR}{LF}<br>{CR}{LF}OK{CR}{LF}  |
| Parameters | <CH>: Channel name<br><Enable>: Authentication enable status when connecting to the server<br>ON (Default value) / OFF<br><Username>: Username required for authentication when connecting to the server [1-128 bytes]<br><Password>: Password required for authentication when connecting to the server [1-128 bytes] |

|             |  |
|-------------|--|
| Description | When disabled, other subsequent parameters do not need to be entered<br>Supported channel protocol: MQTT |
|-------------|--|

### 1.5.3. AT+MQTTFAMILYWILL

|             |  |
|-------------|--|
| Name        | AT+MQTTFAMILYWILL  |
| Function    | Query/set MQTT will message  |
| Query       | AT+ MQTTFAMILYWILL=<CH>{CR}{LF}<br>{CR}{LF}+MQTTFAMILYWILL:<CH>,<Enable>,<Topic>,<Qos>,<Payload>{CR}{LF}<br>{CR}{LF}OK{CR}{LF}   |
| Setting     | AT+MQTTFAMILYWILL =<CH>,<Enable>,<Topic>,<Qos>,<Payload>{CR}{LF}<br>{CR}{LF}OK{CR}{LF}   |
| Parameters  | <CH>: Channel name<br><Enable>: Switch status<br>ON / OFF (default value)<br><Topic>: Will topic name (1-128 bytes)<br><Qos>: Quality of Service for the will message<br>0 - At most once<br>1 - At least once<br>2 - Exactly once |
| Description | When disabled, other subsequent parameters do not need to be entered<br>Supported channel protocol: MQTT   |

### 1.5.4. AT+MQTTFAMILYCLEAN

|            |  |
|------------|--|
| Name       | AT+MQTTFAMILYCLEAN   |
| Function   | Query/set MQTT clean session function  |
| Query      | AT+ MQTTFAMILYCLEAN=<CH>{CR}{LF}<br>{CR}{LF}+MQTTFAMILYCLEAN:<CH>,<Enable>{CR}{LF}<br>{CR}{LF}OK{CR}{LF} |
| Setting    | AT+ MQTTFAMILYRCTM =<CH>,<Enable>{CR}{LF}<br>{CR}{LF}OK{CR}{LF}  |
| Parameters | <CH>: Channel name<br><Enable>: Switch status  |

|             |                                       |
|-------------|---------------------------------------|
|             | ON / OFF (default value)              |
| Description | Supported channel protocols: MQTT/AWS |

### 1.5.5. AT+MQTTFAMILYRCTM

|             |  |
|-------------|--|
| Name        | AT+MQTTFAMILYRCTM  |
| Function    | Query/set MQTT reconnection detection interval   |
| Query       | AT+ MQTTFAMILYRCTM=<CH>{CR}{LF}<br>{CR}{LF}+MQTTFAMILYRCTM:<CH>,<RCTim>{CR}{LF}<br>{CR}{LF}OK{CR}{LF}                    |
| Setting     | AT+ MQTTFAMILYRCTM =<CH>,<RCTim>{CR}{LF}<br>{CR}{LF}OK{CR}{LF}   |
| Parameters  | <CH>: Channel name<br><br><RCTim>: Reconnection detection interval ( 1-3600 seconds,<br>default interval time: 5 seconds |
| Description | Supported channel protocols: MQTT/AWS  |

### 1.5.6. AT+MQTTFAMILYHEART

|            |   |
|------------|---|
| Name       | AT+MQTTFAMILYHEART  |
| Function   | Query/set MQTT heartbeat time   |
| Query      | AT+ MQTTFAMILYHEART=<CH>{CR}{LF}<br>{CR}{LF}+MQTTFAMILYHEART:<CH>,<Heart>{CR}{LF}<br>{CR}{LF}OK{CR}{LF} |
| Setting    | AT+ MQTTFAMILYHEART =<CH>,<Heart>{CR}{LF}<br>{CR}{LF}OK{CR}{LF}   |
| Parameters | <CH>: Channel name<br><Heart>: Heartbeat packet time<br>MQTT/AWS: 30 ( default ) ( 0-6000 seconds )     |

|             |                                       |
|-------------|---------------------------------------|
| Description | Supported channel protocols: MQTT/AWS |
|-------------|---------------------------------------|

## 1.6. MQTT Topic Configuration

### 1.6.1. AT+TOPICPUBLIST

|             |  |
|-------------|--|
| Name        | AT+TOPICPUBLIST  |
| Function    | Query MQTT preset publish topic list   |
| Query       | {CR}{LF}+TOPICPUBLIST:<CH>,<name>,<Topic>,<Qos>,<Retained>,<BindCOM>,<description>{CR}{LF}{CR}{LF}OK{CR}{LF}   |
| Parameters  | <p>&lt;CH&gt; : Channel name</p> <p>&lt;name&gt;: name</p> <p>&lt;Topic&gt; : Publishing Topic Name</p> <p>&lt;Qos&gt; : Quality of Service Level</p> <p>0 - At Most Once</p> <p>1 - At Least Once</p> <p>2 - Exactly Once</p> <p>&lt;Retained&gt; : Is the message to be retained?</p> <p>ON (Default) / OFF</p> <p>&lt;BindCOM&gt; : Bound Channel</p> <p>485 - COM1-485</p> <p>232 - COM2-232</p> <p>ALL - COM1&amp;COM2</p> <p>&lt;description&gt; : Description</p> |
| Description | Supported channel protocols: MQTT/AWS  |

### 1.6.2. AT+TOPICPUBADD

|          |   |
|----------|---|
| Name     | AT+TOPICPUBADD  |
| Function | Add a new topic to the preset publish topics  |
| Setting  | AT+TOPICPUBADD<br>=<CH>,<name>,<Topic>,<Qos>,<Retained>,<BindCOM>,<description>{CR}{LF} |

|             |   |
|-------------|---|
|             | {CR}{LF}OK{CR}{LF}  |
| Parameters  | <p>&lt;CH&gt; : Channel name<br/> &lt;name&gt;: name<br/> &lt;Topic&gt;: Add new topic name<br/> &lt;Qos&gt;: Quality of Service Level<br/> 0 - At Most Once<br/> 1 - At Least Once<br/> 2 - Exactly Once<br/> &lt;Retained&gt;: Is the message to be retained?<br/> ON (Default) / OFF<br/> &lt;BindCOM&gt;: Bound Channel<br/> 485 - COM1-485<br/> 232 - COM2-232<br/> ALL - COM1&amp;COM2<br/> &lt;description&gt; : Description</p> |
| Description | Supported channel protocols: MQTT/AWS   |

### 1.6.3. AT+TOPICPUBDEL

|             |   |
|-------------|---|
| Name        | AT+TOPICPUBDEL  |
| Function    | Delete the topic with this name from the preset publish topics in the specified channel                 |
| Setting     | AT+ TOPICPUBDEL =<CH>,<name>{CR}{LF}<br>{CR}{LF}OK {CR}{LF}   |
| Parameters  | <CH> : Channel name<br><name>: The Publish topics name to be deleted in this channel name (1-128 bytes) |
| Description | Supported channel protocols: MQTTAWS  |

### 1.6.4. AT+TOPICPUBCLR

|            |  |
|------------|--|
| Name       | AT+TOPICPUBCLR   |
| Function   | Clear the preset publish topics of the specified channel |
| Setting    | AT+TOPICPUBCLR=<CH> {CR}{LF}<br>{CR}{LF} OK{CR}{LF}      |
| Parameters | <CH>:Channel name  |

|             |                                       |
|-------------|---------------------------------------|
| Description | Supported channel protocols: MQTT/AWS |
|-------------|---------------------------------------|

### 1.6.5. AT+TOPICSUBLIST

|             |   |
|-------------|---|
| Name        | AT+TOPICSUBLIST   |
| Function    | Query MQTT preset subscription topic list   |
| Query       | AT+TOPICSUBLIST=<CH> {CR}{LF}<br>{CR}{LF}+TOPICSUBLIST:<CH>,<name>,<Topic>,<Qos>,<BindCOM>,<description><br>{CR}{LF}<br>{CR}{LF} OK{CR}{LF}   |
| Parameters  | <CH> : Channel name<br><name>: name<br><Topic>: Subscription topic name<br><Qos>: Quality of Service QoS Level<br>0 - At Most Once<br>1 - At Least Once<br>2 - Exactly Once<br><Retained>: Is the message to be retained?<br>ON (Default) / OFF<br><BindCOM>: Bound Channel<br>485 - COM1-485<br>232 - COM2-232<br>ALL - COM1&COM2<br><description> : Description |
| Description | Supported channel protocols: MQTT/AWS   |

### 1.6.6. AT+TOPICSUBADD

|          |   |
|----------|---|
| Name     | AT+TOPICSUBADD  |
| Function | Add a new topic to the preset subscription topics   |
| Setting  | AT+TOPICSUBADD<br>=<CH>,<name>,<Topic>,<Qos>,<BindCOM>,<description><br>{CR}{LF}<br>{CR}{LF} OK{CR}{LF} |

|             |   |
|-------------|---|
| Parameters  | <p>&lt;CH&gt; : Channel name<br/> &lt;name&gt;: name<br/> &lt;Topic&gt; : Add a new subscription topic<br/> &lt;Qos&gt; : Quality of Service (QoS) Level<br/> 0 - At Most Once<br/> 1 - At Least Once<br/> 2 - Exactly Once<br/> &lt;Retained&gt; : Is the message to be retained?<br/> ON (Default) / OFF<br/> &lt;BindCOM&gt; : Bound Channel<br/> 485 - COM1-485<br/> 232 - COM2-232<br/> ALL - COM1&amp;COM2<br/> &lt;description&gt; : Description</p> |
| Description | Supported channel protocols: MQTT/AWS   |

### 1.6.7. AT+TOPICSUBDEL

|             |  |
|-------------|--|
| Name        | AT+TOPICSUBDEL   |
| Function    | Delete the topic with this name from the preset subscription topics of the specified channel |
| Setting     | AT+TOPICSUBDEL=<CH>,<name>{CR}{LF}<br>{CR}{LF} OK{CR}{LF}                                    |
| Parameters  | <CH>: Channel name<br><br><name> : Topic name to be deleted                                  |
| Description | Supported channel protocols: MQTT/AWS  |

### 1.6.8. AT+TOPICSUBCLR

|          |   |
|----------|---|
| Name     | AT+TOPICSUBCLR  |
| Function | Clear the preset subscription topics of the specified channel |
| Setting  | AT+TOPICSUBCLR=<CH> {CR}{LF}<br>{CR}{LF} OK{CR}{LF}           |

|             |                                       |
|-------------|---------------------------------------|
| Parameters  | <CH>: Channel name                    |
| Description | Supported channel protocols: MQTT/AWS |

## 1.7. Advanced Settings

### 1.7.1. AT+NETAT

|             |   |
|-------------|---|
| Name        | AT+NETAT  |
| Function    | Query/set network AT  |
| Query       | AT+NETAT? {CR}{LF}<br>{CR}{LF} +NETAT:<Enable>,<Password> {CR}{LF}<br>{CR}{LF} OK{CR}{LF}                   |
| Setting     | AT+ NETAT=<Enable>[,<Password>] {CR}{LF}<br>{CR}{LF} OK{CR}{LF}   |
| Parameters  | <Enable>: Enable<br>ON / OFF (Default:ON)<br><Password>: Network AT password<br>Default password: atnetcmd# |
| Description | Supported channel protocols: MQTT/AWS   |

## 1.8. Serial Port Heartbeat Packet

### 1.8.1. AT+HEARTEN

|      |            |
|------|------------|
| Name | AT+HEARTEN |
|------|------------|

|             |  |
|-------------|--|
| Function    | Set/query heartbeat packet enable  |
| Query       | AT+HEARTEN?{CR}{LF}<br>{CR}{LF}+HEARTEN:<Enable>{CR}{LF}<br>{CR}{LF}OK{CR}{LF} |
| Setting     | AT+HEARTEN=<Enable>{CR}{LF}<br>{CR}{LF}OK{CR}{LF}                              |
| Parameters  | <Enable>: Heartbeat packet enable status<br>ON / OFF (Default)                 |
| Description | Supported channel protocols: MQTT/AWS  |

### 1.8.2. AT+HEARTBIND

|            |   |
|------------|---|
| Name       | AT+HEARTBIND  |
| Function   | Query/set serial port heartbeat packet bound port                                       |
| Query      | AT+HEARTBIND?{CR}{LF}<br>{CR}{LF}+HEARTBIND:<BindCOM>{CR}{LF}<br>{CR}{LF}OK{CR}{LF}     |
| Setting    | AT+ HEARTBIND=<BindCOM>{CR}{LF}<br>{CR}{LF}OK{CR}{LF}                                   |
| Parameters | <BindCOM>: Bound serial port<br><br>485 - COM1-485<br>232 - COM2-232<br>ALL - COM1&COM2 |

### 1.8.3. AT+HEARTTM

|          |   |
|----------|---|
| Name     | AT+HEARTTM  |
| Function | Set/query heartbeat time  |
| Query    | AT+HEARTTM?{CR}{LF}<br>{CR}{LF}+HEARTTM:<heart_times>{CR}{LF}<br>{CR}{LF}OK{CR}{LF} |

|            |  |
|------------|--|
| Setting    | AT+HEARTTM=<heart_times>{CR}{LF}<br>{CR}{LF}OK{CR}{LF} |
| Parameters | <heart_times>:Heartbeat time, range: 1~6000seconds     |

#### 1.8.4. AT+HEARTDT

|            |   |
|------------|---|
| Name       | AT+HEARTDT  |
| Function   | Set/query Serial port heartbeat packet function                                   |
| Query      | AT+HEARTDT?{CR}{LF}<br>{CR}{LF}+HEARTDT:<heartbeat>{CR}{LF}<br>{CR}{LF}OK{CR}{LF} |
| Setting    | AT+ HEARTDT=<heartbeat>{CR}{LF}<br>{CR}{LF}OK{CR}{LF}                             |
| Parameters | <heartbeat>:Custom heartbeat packet content, range [1, 32] bytes                  |

#### 1.8.5. AT+HEARTDTHEX

|            |   |
|------------|---|
| Name       | AT+HEARTDTHEX   |
| Function   | Set/query Serial port heartbeat packet content  |
| Query      | AT+HEARTDTHEX?{CR}{LF}<br>{CR}{LF}+HEARTDTHEX:<heartbeat>{CR}{LF}<br>{CR}{LF}OK{CR}{LF} |
| Setting    | AT+ HEARTDTHEX =<heartbeat>{CR}{LF}<br>{CR}{LF}OK{CR}{LF}                               |
| Parameters | <heartbeat>:Custom heartbeat packet content with HEX, range [1, 32] bytes               |

### 1.9. Timeout Restart

#### 1.9.1. AT+NETRSTIM

|      |             |
|------|-------------|
| Name | AT+NETRSTIM |
|------|-------------|

|             |  |
|-------------|--|
| Function    | Set/query no-data restart time   |
| Query       | AT+NETRSTIM?{CR}{LF}<br>{CR}{LF}+NETRSTIM:<Enable>,<timeout_restart>{CR}{LF}<br>{CR}{LF}OK{CR}{LF}   |
| Setting     | AT+NETRSTIM=<Enable>[,<timeout_restart>]{CR}{LF}<br>{CR}{LF}OK{CR}{LF}   |
| Parameters  | <Enable> : Enable this function<br><br>ON / OFF (Default)<br><br><timeout_restart>: No-data restart time, range:60-36000 seconds<br>Default value: 36000 |
| Description | No need to input other parameters when disabling this function   |

### 1.9.2. AT+NETRCTIM

|             |  |
|-------------|--|
| Name        | AT+NETRCTIM  |
| Function    | Set/query no-data re-connection time   |
| Query       | AT+NETRCTIM?{CR}{LF}<br>{CR}{LF}+NETRCTIM:<Enable>,<timeout_restart>{CR}{LF}<br>{CR}{LF}OK{CR}{LF}   |
| Setting     | AT+NETRCTIM=<Enable>[,<timeout_restart>]{CR}{LF}<br>{CR}{LF}OK{CR}{LF}   |
| Parameters  | <Enable> : Enable this function<br><br>ON / OFF (Default)<br><br><timeout_restart>: No-data re-connection time, range:60-3600s<br>Default value: 3600s |
| Description | No need to input other parameters when disabling this function   |

### 1.9.3. AT+COMRSTIM

|          |   |
|----------|---|
| Name     | AT+COMRSTIM   |
| Function | Set / Query the time for serial port to restart without data transmission |

|             |   |
|-------------|---|
| Query       | AT+COMRSTIM?{CR}{LF}<br>{CR}{LF}+COMRSTIM:<Enable>,<BindCOM>,<timeout_restart>{CR}{LF}<br>{CR}{LF}OK{CR}{LF}  |
| Setting     | AT+COMRSTIM=<Enable>[,<BindCOM>,<timeout_restart>]{CR}{LF}<br>{CR}{LF}OK{CR}{LF}  |
| Parameters  | <Enable> : Enable<br>ON (default) / OFF<br><BindCOM> : Bound serial port<br>485 - COM1-485<br>232 - COM2-232<br>ALL - COM1&COM2<br><timeout_restart>: No-data restart time, range: 60~3600 seconds<br>default value: 3600 seconds |
| Description | No need to enter other subsequent parameters when disabling this function   |
